

CONTENTS

Introduction	2
Chapter 1. Main knowledges about atomic spectroscopy	5
1.1. The classification of levels	5
1.2. The radiative transitions. Line strengths and oscillator strengths. Transition probabilities.	6
Chapter 2. Radiative transitions and photoprocesses	9
2.1. Transition probabilities, oscillator strengths and mean lifetimes.	9
2.2. Photoionization	9
2.2.1. Photoionization from K and L shells	11
2.3. Photorecombination	13
2.4. Photoheating and recombination cooling	15
2.4.1. Photoheating rates	15
2.4.2. Recombination cooling rates	17
2.5. Scaling relations for photoionization and photorecombination rates	18
Chapter 3. Collision processes	19
3.1. Electron impact ionization.	19
3.2. Electron impact excitation.	21
3.3. Excitation by collision with heavy particles	23
3.3.1. Excitation by protons	23
3.3.2. Excitation by neutral hydrogen and more heavy particles	23
3.4. Autoionization	24
3.5. Dielectronic recombination	25
3.6. Charge transfer reactions	28
Chapter 4. Spectra of the gaseous nebulae and their interpretation	31
4.1. Recombination line intensities	31
4.2. Collision-excited lines	32
4.3. Selective mechanisms of the line excitation	36
4.4. Plasma diagnostics for n_e and T_e	37
4.5. Chemical abundance determination	38
4.6. Continuous spectra	39
Delivery of the catalogue and additional information	40
References	41
Table 1. Transition probabilities for HI transitions	
Table 2. Transition probabilities for HeI transitions	
Table 3. Parameters of photoionization cross-section from the ground and excited states (Eq.2.2)	
Table 4. Parameters of photoionization cross-section from the K - shell (Eq2.3)	
Table 5. Parameters of approximation for the collisional ionization, radiative and dielectronic recombination (Eq(2.6), (2.19), (2.24))	
Table 6. Radiative Recombination Rates on the HeI ion levels	
Table 7. Photoheating rates for HI levels	
Table 8. Recombination cooling rates for HI	
Table 9 Parameters for the electron collision ionization (Eq. 2.8)	
Table 10. Parameters for determination of the function f_2 in Eq.(2.9)	
Table 11. Parameters A and χ in Eq.(2.10) for the different shells	

Table 12. Parameters q_j , I_j and \overline{C} in Eq.(2.11) for determination of the collisional ionization rates	
Table 13. Coefficients of polynomial fit to the electron impact effective collision strengths for atomic hydrogen (Eq. 3.10).	
Table 14. Electron impact excitation rates for atomic hydrogen (Eq.3.8)	
Table 15. Approximation parameters for the electron impact excitation rates for the some ions	
Table 15a. Energies and designations for the ground and metastable levels of the selected atoms and ions	
Table 15b. Transition probabilities and effective collision strengths γ_{ij} of the selected atoms and ions	
Table 15c. Rates of the fine structure transitions excitation by proton impact	
Table 16. Parameters a_i and T_i for the total rates of dielectronic recombination	
Table 17. Approximation parameters for dielectronic recombination	
Table 18. Charge transfer rates for collisions with H and He	
Table 19. Parameters for recombination and ionization charge transfer with H and He	
Table 20. Parameters for charge transfer with H^0 and He^+	
Table 21. Recombination charge transfer rates in units $10^{-9}cm^3 s^{-1}$ between atoms and ions of heavy elements	
Table 22. List of the lines observed in the spectra of gaseous nebulae	
Table 23. Relative Intensities of the HI recombination lines	
Table 24. Relative Intensities of the HeI recombination lines	
Table 25. Relative Intensities of the HeII recombination lines	
Table 26. Relative Intensities of the C, N, O ions recombination lines	
Table 27. Parameters of the analytical approximation (Eq3.6) of the effective dielectronic recombination coefficients for lines of the ions of C, N, O, Ne, Mg, Al and Si	
Table 28. The values of total and partial effective recombination coefficients
